Confluence Rich Filters Demo

You can import and use the rich filter gadgets in Confluence too. You don't need to purchase and install another dedicated Confluence app. All you have to do is to register the Rich Filter gadgets as external gadgets on your Confluence instance. The gadgets will display real-time data from Jira on your Confluence page. The controller gadget will behave just like in Jira – by selecting any of the quick filters, the other gadgets will refresh to reflect the filtering.

This is particularly useful if you wish to provide reporting and business intelligence to your management team. Confluence allows you to add text content that can be combined with metrics, statistics, charts and issue views from Jira. This way you can provide a real-time and easy-to-use view on your status/progress.
