

# Confluence Rich Filters Demo Annotated

You can import and use the rich filter gadgets in Confluence too. The gadgets will display real-time data from Jira on your Confluence page. The controller gadget will behave just like in Jira – by selecting any of the quick filters, the other gadgets will refresh to reflect the filtering.

This is particularly useful if you wish to provide reporting and business intelligence to your management team. Confluence allows you to add text content that can be combined with metrics, statistics, charts and issue views from Jira. This way you can provide a real-time and easy-to-use view on your status/progress.

## Select filters to update the charts below
